

Principessa – Stool

Client /

Year / 2025

Sector / Furniture

Key materials / HI-MACS Thermoforming

Principessa is a seat developed from a formal reference, inspired by the soft, graceful lines of an evocative figure capable of stimulating the creative process.

A stool shaped by arched, enveloping forms and a distinctive silhouette, it combines comfort and form, demonstrating my dedication to sculptural and functional design.

The monochromatic finish, applied to the interior, emphasizes the shape and depth and creates an interplay of lights and shadows, finalizing the creative concept. There are three finishes available: Terra (red), Oliva (green), and Sole (yellow).

Principessa embraces you comfortably for a break or a convivial gathering with friends. It can complement outdoor furnishings, a poolside setting, or it can even be used to personalize and complete an interior living area.

The structure is made of four 12 mm-thick HIMACS S928 ULTRA THERMOFORMING WHITE elements, thermoformed and then assembled to create a continuous geometry, with visible, and deliberately emphasized, seams that characterize the shapes.

The result is a dynamic silhouette, defined by a smooth surface and a fluid and seductive aesthetic.

Principessa is handcrafted in collaboration with KUBICO (Galatina, Lecce), a historic leader in modern and contemporary design.

Principessa Plus – Bench

The evolution of the stool's design is enriched with the "Principessa Plus" bench, which further emphasizes the concept of the stool, PP completes the unique set intended for a furniture that blends style and functionality.
